Oncoinvent

Transforming cancer care through direct alpha therapy

March 2026

Radspherin®: A Breakthrough in Post-Surgical Cancer Therapy

1. Non-biological, **receptor independent** mode of action with alpha emitter
2. **Harnessing** the advantages of radiopharmaceuticals with **lower complexity** and risk
3. **Signals of efficacy**: potential game changer in ovarian and colorectal cancers
4. **Advancements in ovarian cancer,** Phase 1 trial delivered promising final results, with Phase 2 trial underway in patients
5. **High unmet medical need in** peritoneal cancers and metastases
6. Developed by industry-leading radiopharmaceutical innovators with a proven track record, including the creators of Xofigo/Algeta (acquired by Bayer).

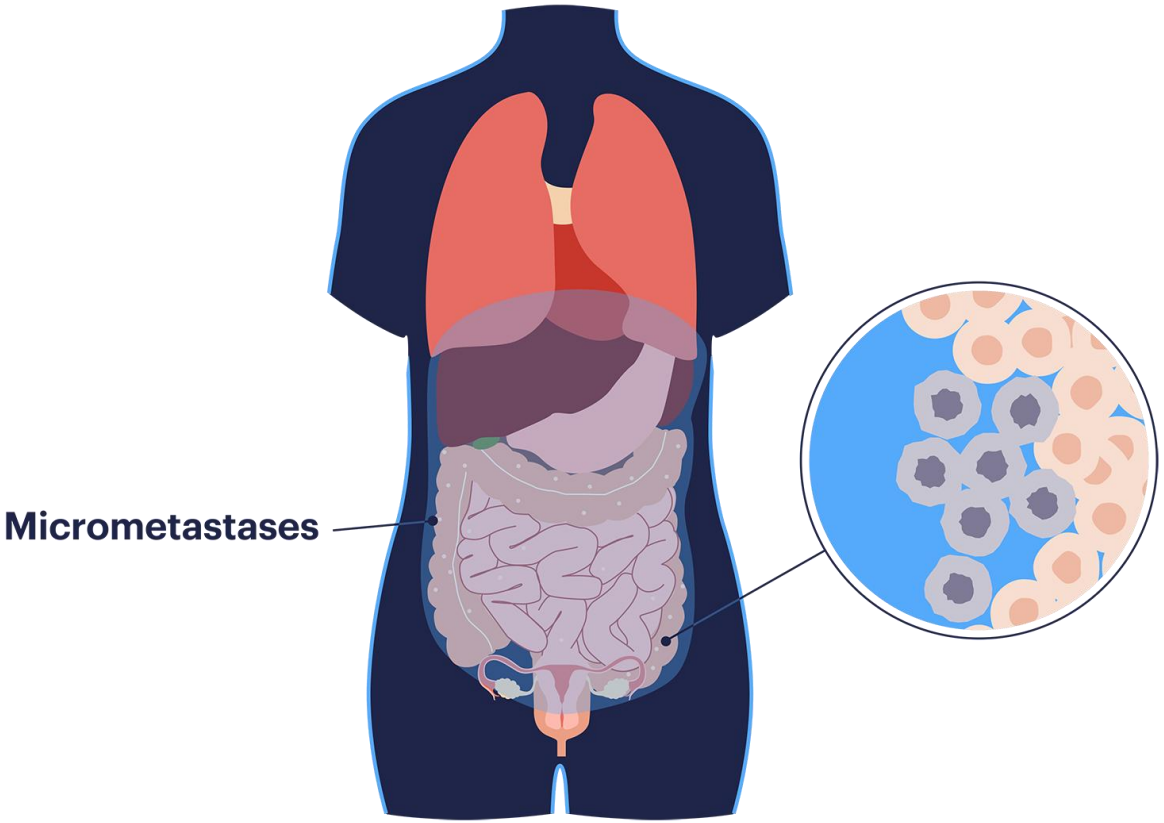
Peritoneal metastases - urgent need for novel treatments



- Peritoneal metastases arise from many **different primary cancers**
- The only treatment option with curative intent is **surgery**, effect of systemic therapy limited
- Surgery leaves behind **micro-metastases** giving rise to new metastases and disease progression
- The abdominal cavity functions, in practice, as a‘**closed compartment**’

The main cause of death in ovarian cancer

70% of all ovarian cancer patients have peritoneal metastasis at diagnosis

Up to 85% relapse after surgical resection

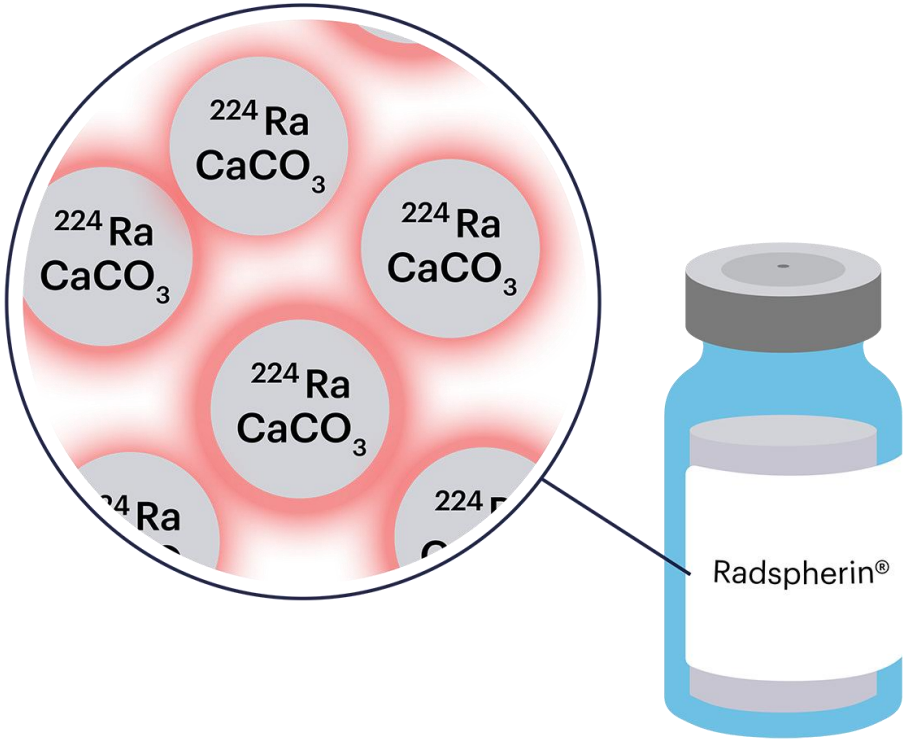
- Despite a comprehensive treatment approach, the majority of patients experience disease recurrence
- Ovarian cancer rarely metastasize hematogenously, recurrences almost exclusively **confined to the peritoneum**
- Need for improved first-line treatments that keep patients in remission – **local control** in the peritoneum is key to improving life expectancy
- FDA Fast Track

Lengyel Am J Pathol. 2010 Sep; 177(3): 1053–1064.
González-Martín N Engl J Med 2019;381:2391-402
Jansen et al. Ann Med Surg (Lond). 2023 May; 85(5): 1539–1545.

Radspherin® - alpha therapy targeted to and retained in the peritoneum

Radspherin®

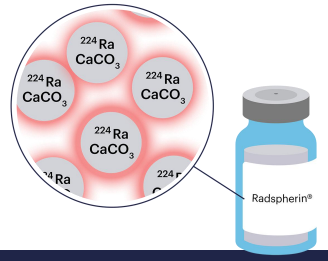
- Combining **alpha-emitting ^{224}Ra** with **$CaCO_3$ microparticles**
- Half-life 3.6 days
- **Therapy with depot effect** - 75% of radiation dose delivered the first week
- Shelf life 8 days allowing for **centralized manufacturing**
- Good **raw material availability** and simple manufacturing



Radspherin® - alpha therapy targeted to and retained in the peritoneum

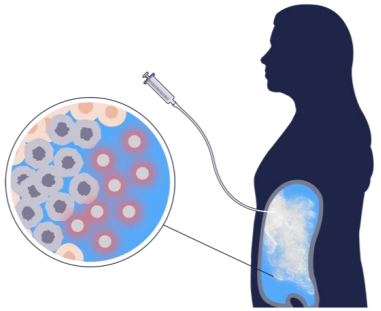
Radspherin®

- Combining **alpha-emitting ^{224}Ra** with **$CaCO_3$ microparticles**
- Half-life 3.6 days
- **Therapy with depot effect** - 75% of radiation dose delivered the first week
- Shelf life 8 days allowing for **centralized manufacturing**
- Good **raw material availability** and simple manufacturing

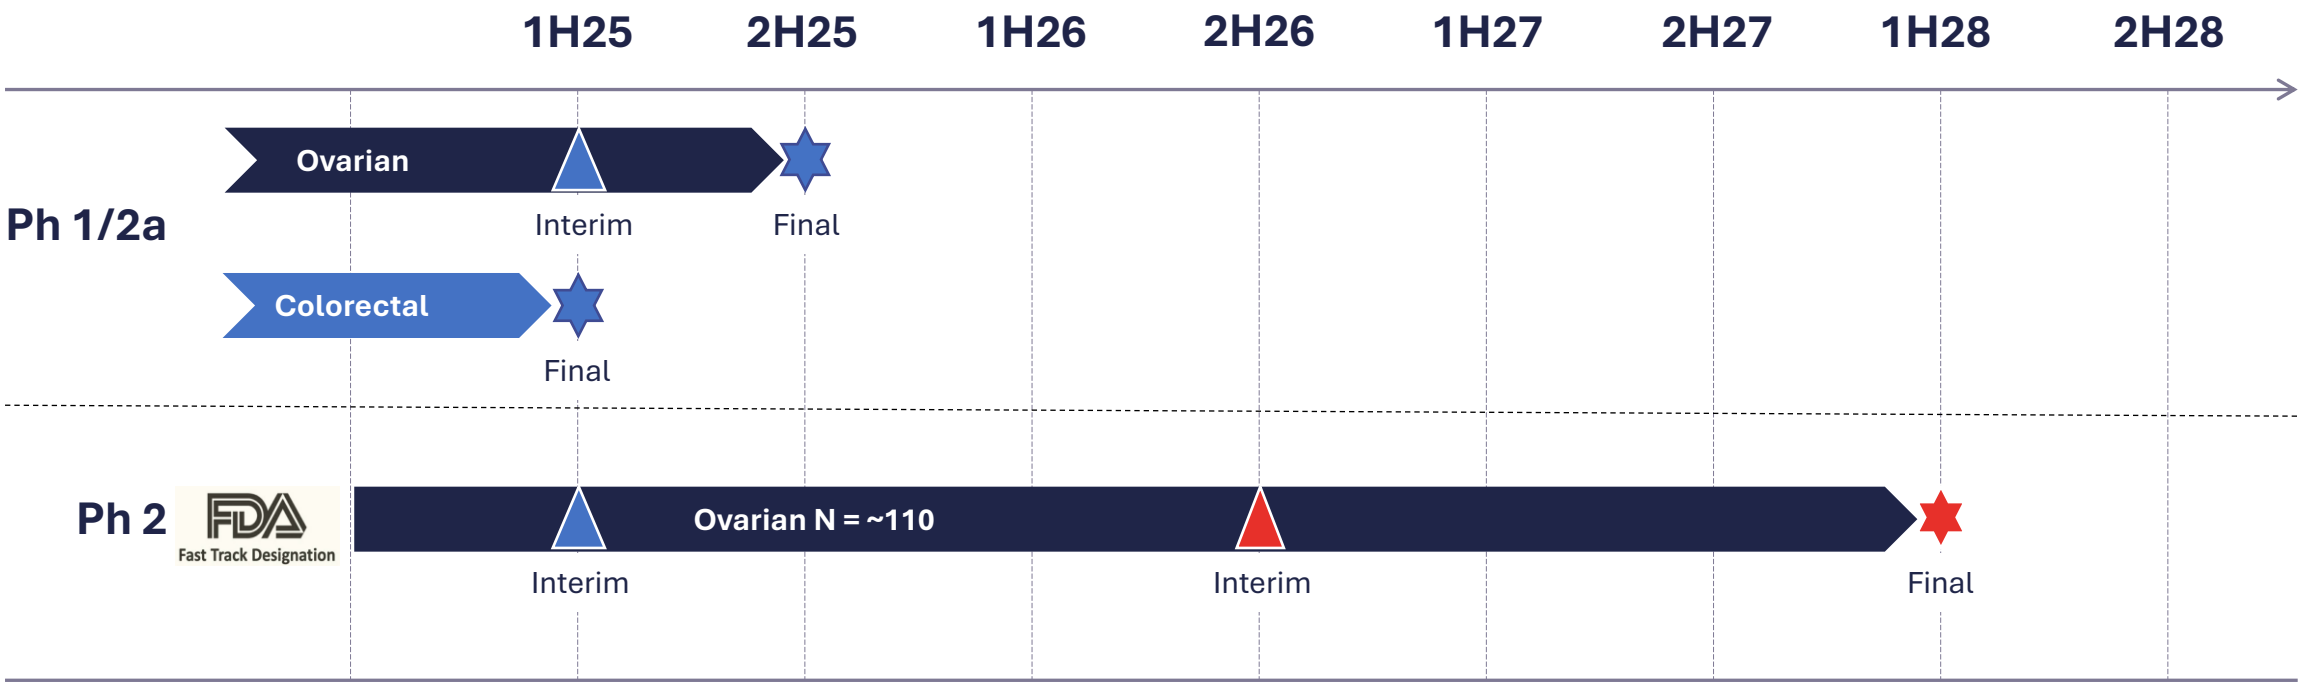


How does it work?

- Delivering a high dose of alpha-radiation directly to the peritoneum through an in-dwelling catheter
- Administration **1-3 days post-surgery**
- High energy and short radiation range enables effective killing of the targeted metastases **while sparing the surrounding normal tissue**



Ongoing clinical development



Completed

Upcoming milestones

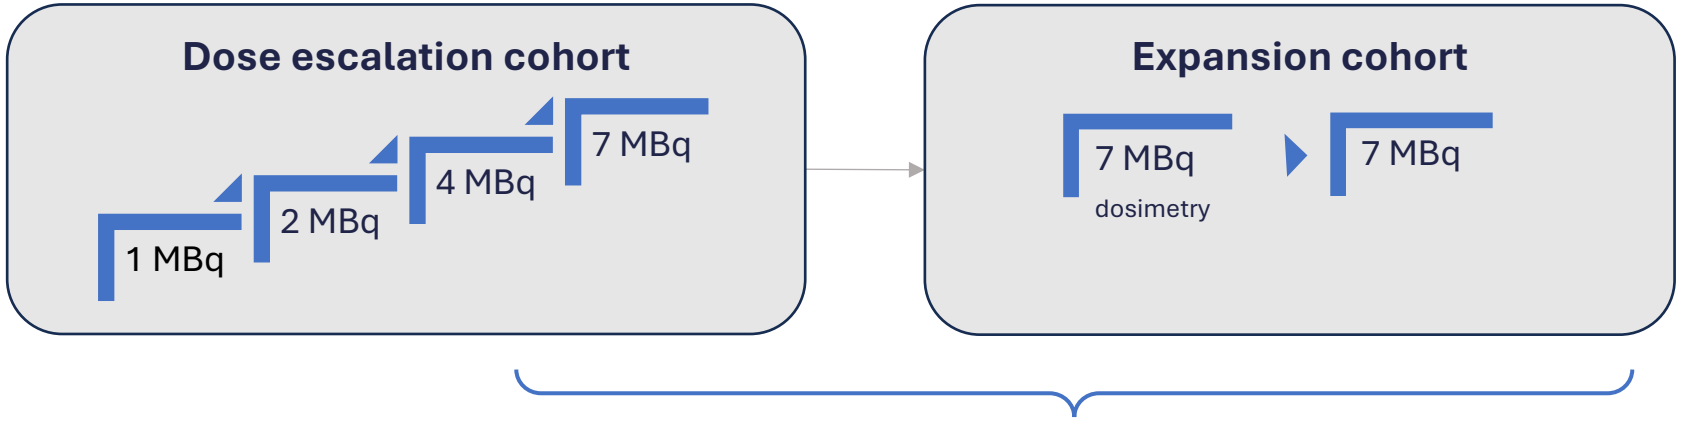
Radspherin® - phase 1 study in ovarian cancer

RAD-18-001: in patients after secondary debulking surgery of platinum-sensitive recurrent ovarian cancer

- single-arm open label study
- 3 + 3 dose-escalation (1, 2, 4, 7 MBq)
- 24 months follow-up

4 clinical sites:

- Oslo, Norway (PI: Yun Wang)
- Leuven, Belgium (PI: Els van Nieuwenhuysen)
- Madrid, Spain (PI: Luis Chiva)
- Pamplona, Spain (PI: Luis Chiva)



Total number of patients recommended dose 7MBq, **n=10**

Ovarian cancer: Preventing disease progression

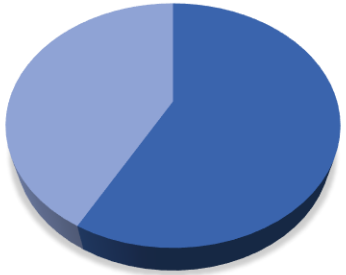
24 months data from 10 patients receiving 7 MBq dose *vs historical recurrence rates*

"These final results are **truly encouraging**, suggesting that Radspherin® could help **delay disease progression and offer patients hope for longer, healthier lives**."

Dr Luis Chiva, Principal Investigator and Director of Department of Obstetrics and Gynecology Clinica Universidad de Navarra

Recurrence rate

Historical controls



~55-60%*

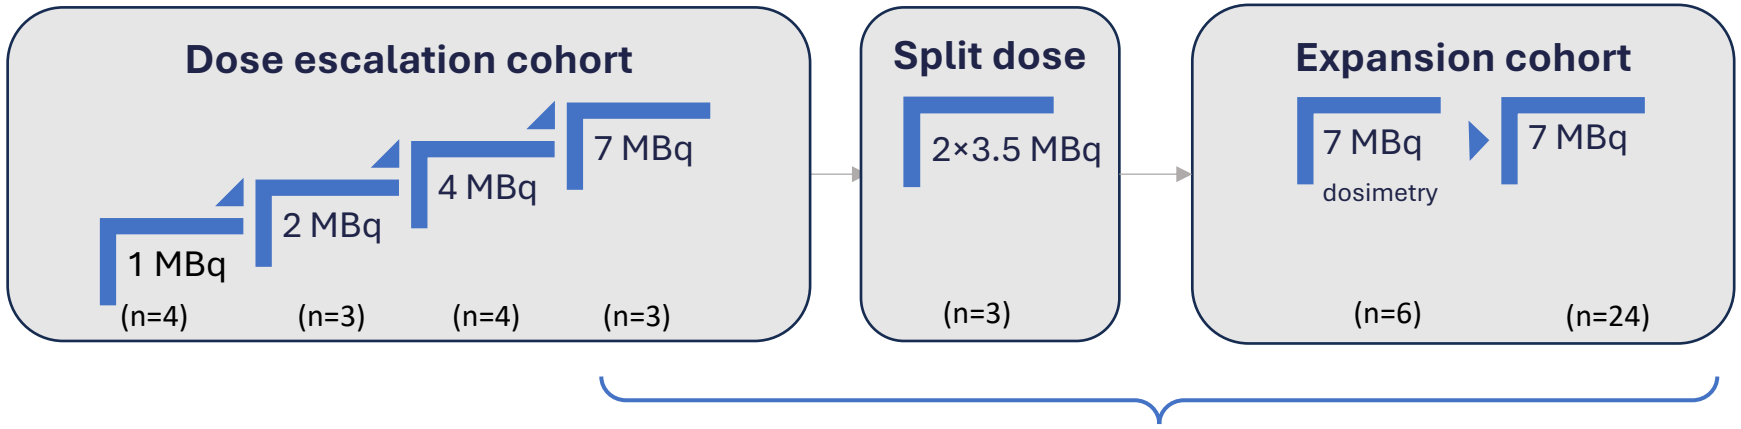
Design: Phase 1/2a in colorectal cancer

The trial: (RAD-18-002) Radspherin after cytoreductive surgery and HIPEC in patients with peritoneal metastasis from colorectal cancer

- Single-arm open label study
- 3 + 3 dose-escalation (1, 2, 4, 7 MBq)
- 18 months follow-up

Two clinical sites:

- Oslo, Norway (PI: Stein Larsen)
- Uppsala, Sweden (PI: Wilhelm Graf)



Total number of patients recommended dose 7MBq, **n=36**

Colorectal cancer: final phase 1/2a data confirm peritoneal control

Topline 18-months data of 36 patients receiving 7 MBq dose vs historical recurrence rates

"It's highly encouraging to see patients treated with Radspherin achieving **outcomes that exceed expectations** for this challenging population."

Dr. Stein Gunnar Larsen
Principal Investigator at the Oslo University Hospital, Norway

Peritoneal recurrence rate

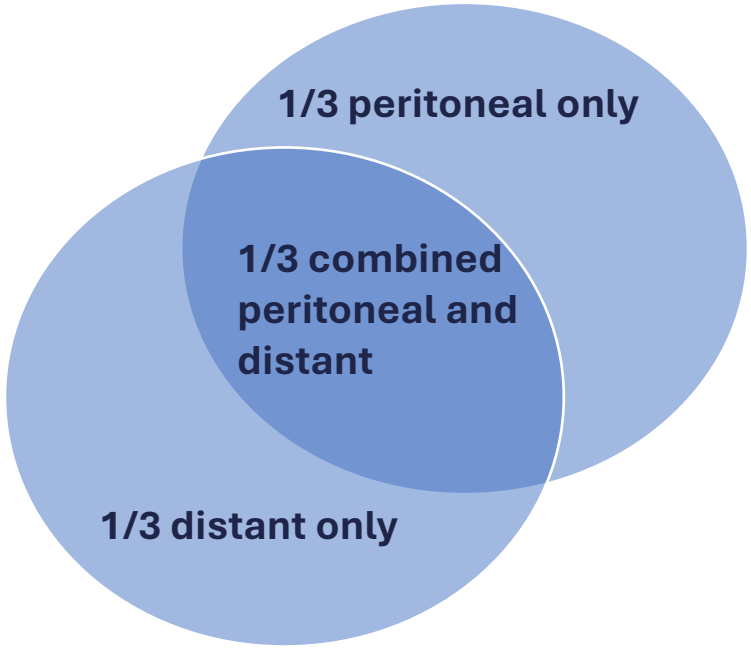
Quenet et al. Lancet Oncol. 2021 Feb;22(2):256-266

Controlling peritoneal disease may significantly improve survival in colorectal cancer

First disease recurrence after treatment [1]



Impact of site of first site of recurrence [1]

Median overall survival - from the time of recurrence:

- After distant metastasis only: 44 months
- After peritoneal metastasis: 22 months

5-year overall survival – from the time of treatment

- Distant metastasis only: 53 %
- Peritoneal metastasis: 19 %

Frøysnes et al. J Surg Oncol. 2016 Aug;114(2):222-7

[1]Treatment with standard of care for resectable peritoneal metastases from colorectal cancer, i.e. cytoreductive surgery and hyperthermic intraperitoneal chemotherapy

Strong safety profile demonstrated in the completed phase 1/2a studies in ovarian and colorectal cancer

Well tolerated and safe to use

- No dose limiting toxicity
- Only two SAEs possibly related to Radspherin*

No evidence of systemic radiation toxicity

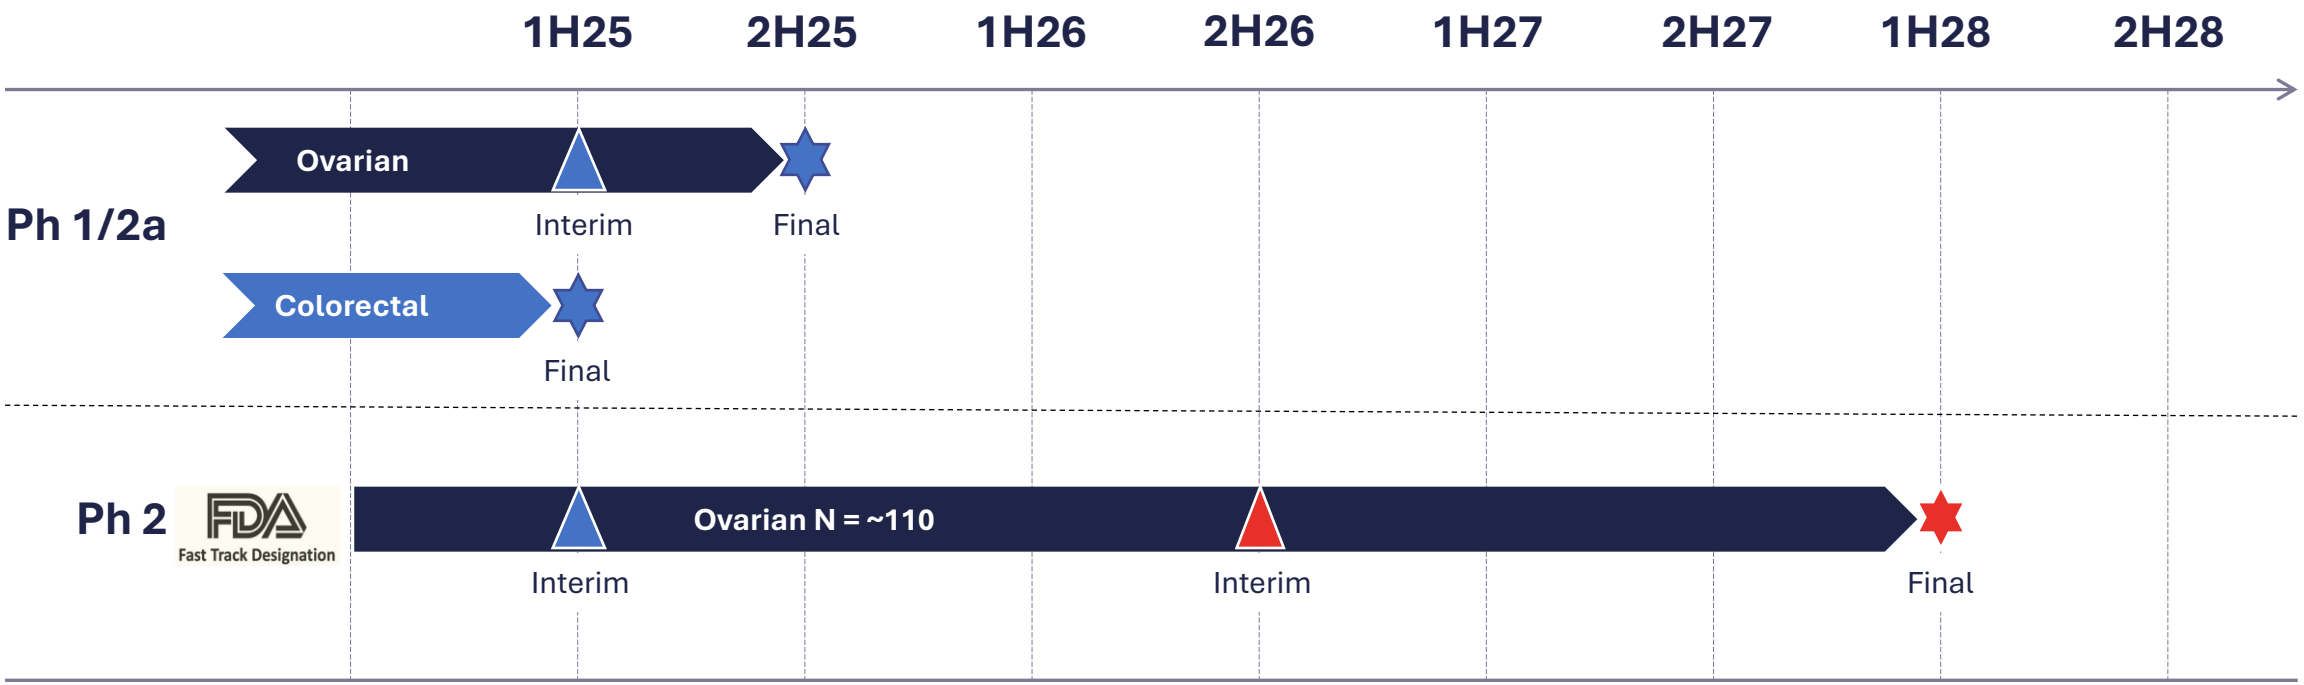
- Radiation dose retained in the peritoneal cavity
- Absorbed doses to other organs well below toxicity levels

Low exposure for hospital staff

- Low radioactivity dose in blood and urine
- No precautions related to external exposure required

*Per cut-off date of annual DSUR March 2025
- one event of small bowel perforation, 72 days after Radspherin administration
- one event of procedural complication during Radspherin administration (disconnection syringe-catheter)

Ongoing clinical development



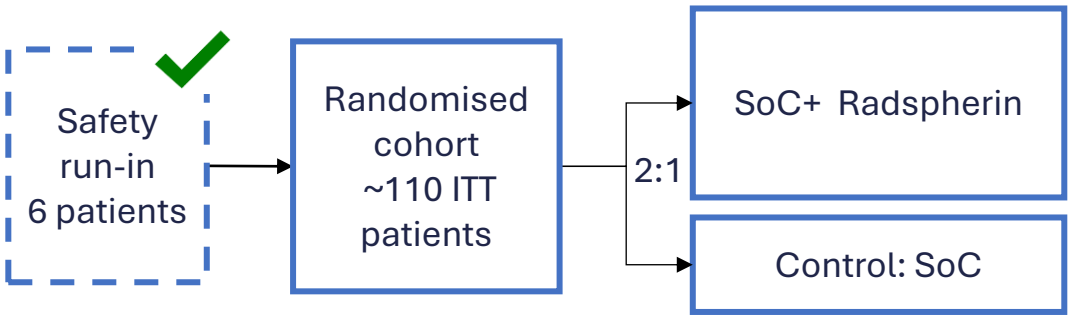
Completed

Upcoming milestones

Randomized Phase 2 study in first-line treatment of ovarian cancer

Patient population

- primary advanced ovarian cancer
- undergoing neoadjuvant chemotherapy and interval debulking surgery
- eligible for complete resection
- HRD negative



Imaging every 3 months up to 24 months

Primary endpoint: progression-free survival

Long-term follow- up for up to 5 years for progression and survival

10 active study sites:
NO, BE, ES (4), UK(2), IT, USA

HRD: Homologous Recombination Deficiency
ITT: Intention to treat
SoC: Standard of Care

NO: Norway
BE: Belgium
ES: Spain

UK: United Kingdom
IT: Italy
USA: United States of America

Peritoneal metastases represent a significant market opportunity

High addressable patient number

- **~24 000** addressable patients in ovarian cancer in **US and EU5 alone**
- Significant potential also in **multiple** other peritoneal cancers
- Future opportunities for tailoring to treatment of cancers in other **body cavities**

Limited competition

- Distinguished by its **unique** mechanism of action
- **Untapped market** – no modern therapies and limited industry development in the specific area of peritoneal metastases
- Strategic advantage: complementing cytoreductive surgery, **reduced threats** from new therapies

Adds perfectly to existing patient flow

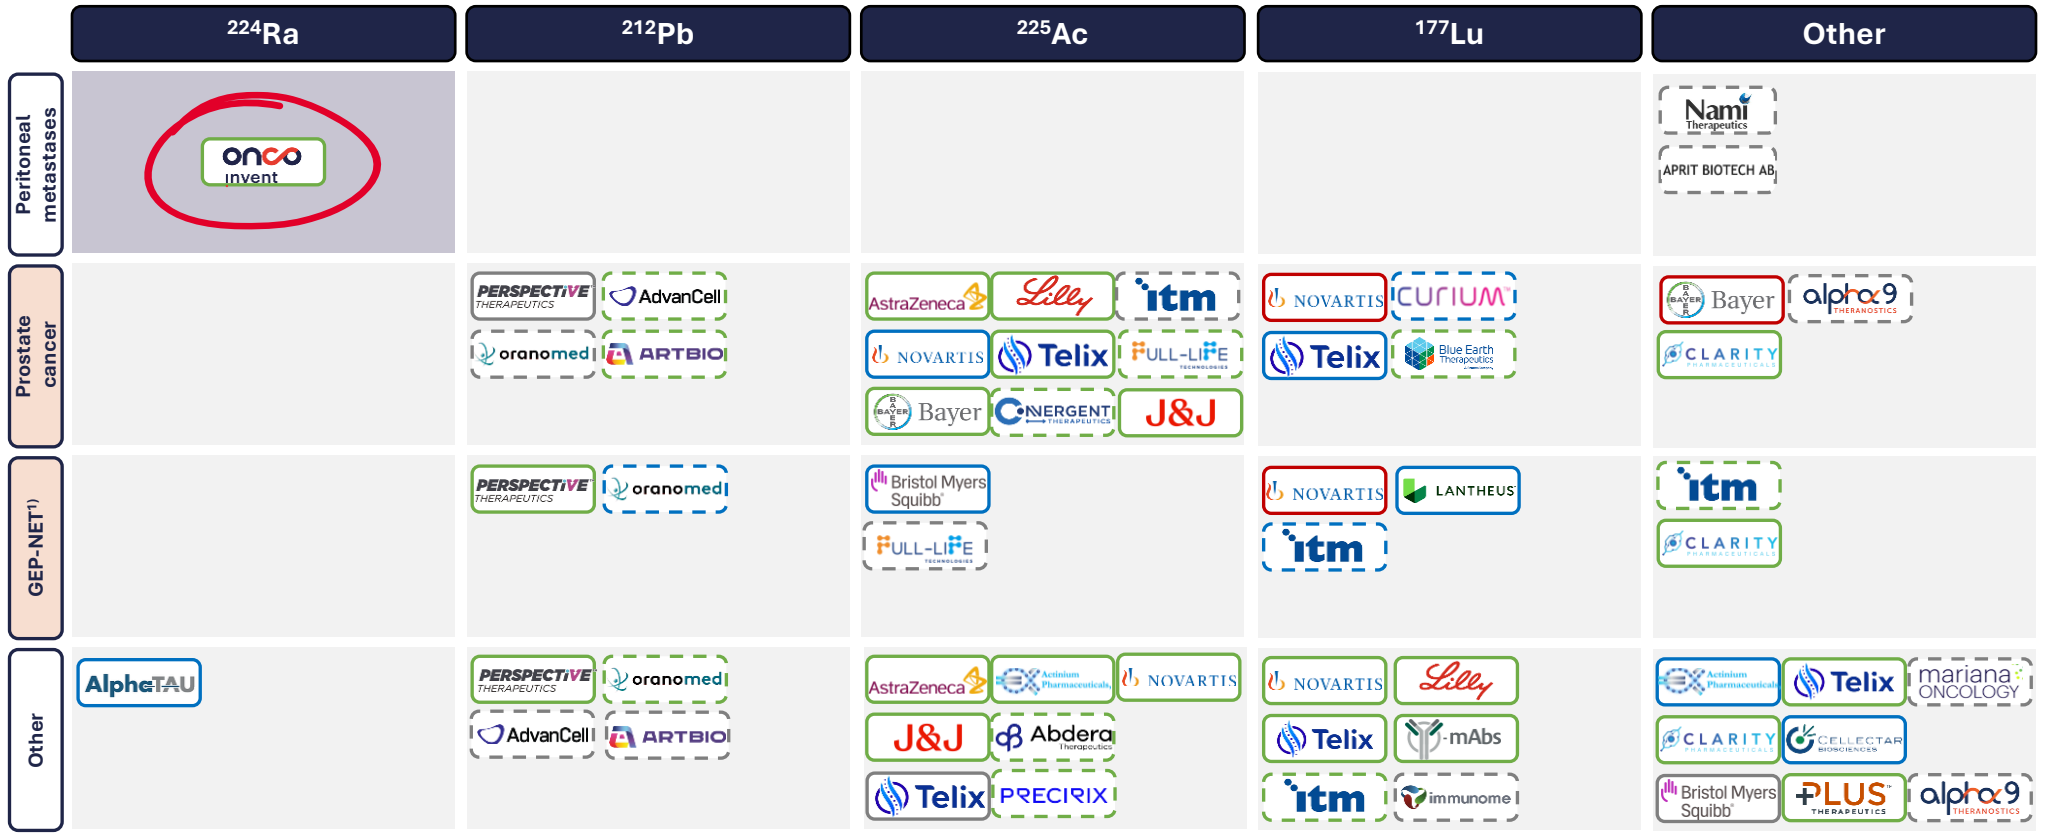
- Surgery is and will remain the cornerstone of treatment
- Treatment given 1-3 days post-operative while the patient is **still hospitalized**
- **Simple and quick** bedside administration
- Single and localized administration – **sustained therapeutic efficacy** and **decreased risk** for off-target effects

Potential for Radspherin® to emerge as a leading treatment option for patients with resectable peritoneal metastases

pPFS: peritoneal progression-free survival

While the radiopharma sector is largely concentrated in two indications, Oncoinvent pursues peritoneal metastases

Snapshot of the Radiopharma Landscape



Commentary

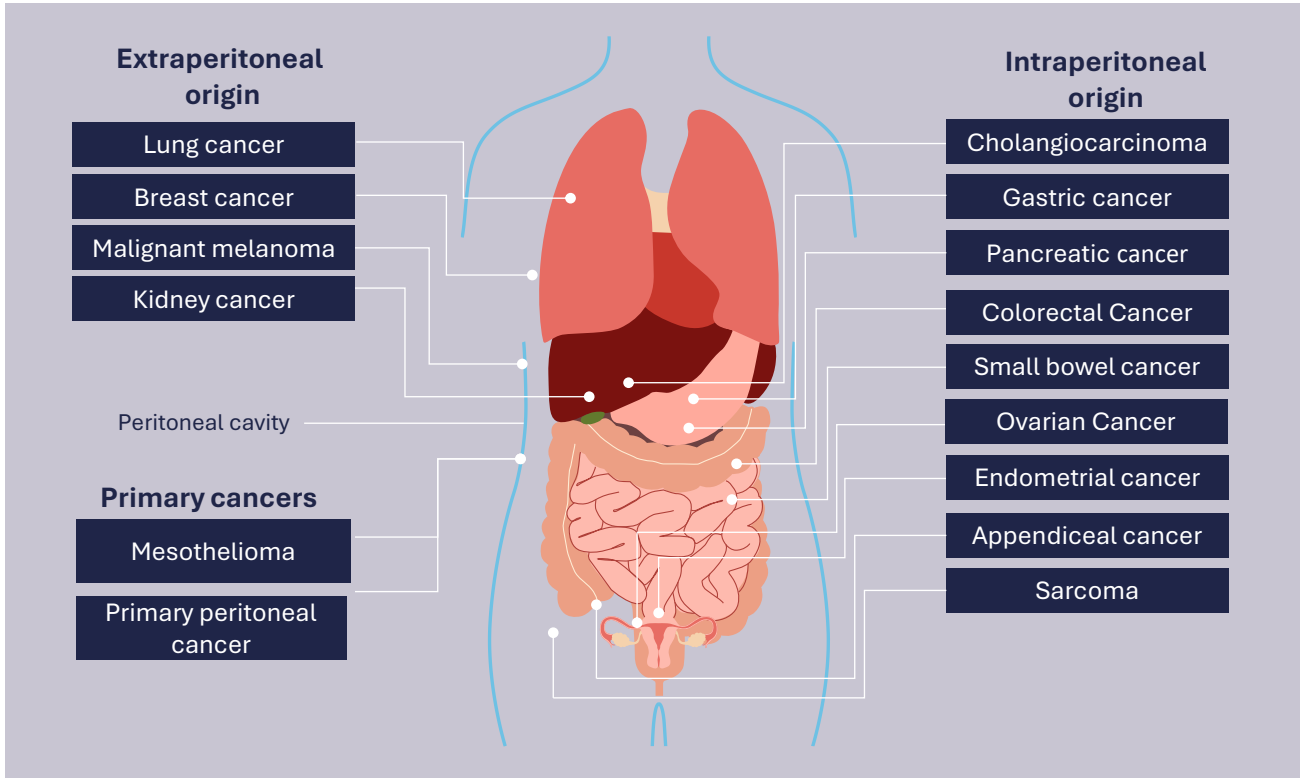
- **Harnessing the advantages of radiopharmaceuticals with reduced complexity** and risk relative to novel radioligand therapies
- Oncoinvent is pioneering peritoneal metastases where **competition is lower**
- Oncoinvent' s drug candidate is based on ^{224}Ra which has good raw material **supply** and long enough **half-life** (3.6 days) to enable efficient logistics and wide-ranging distribution

Notes: 1) GEP-NET: Gastroenteropancreatic neuroendocrine tumors
Source: Guggenheim, Oppenheimer, Company information, Company websites and presentations

Development stage: Preclinical, Early Clinical, Late Clinical, Commercial
Company type: Public, Private

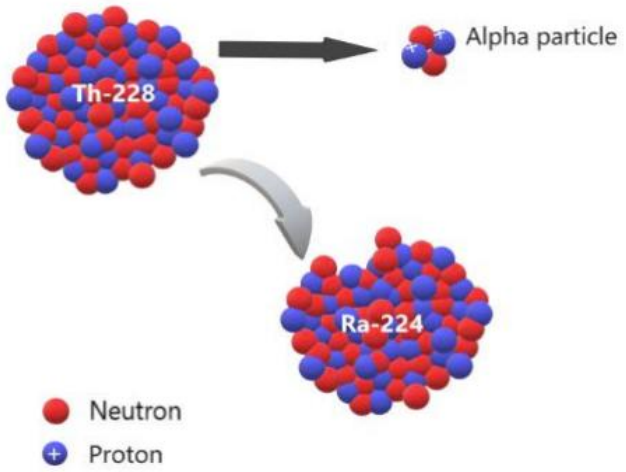
Pipeline in one product - broad clinical application

- Peritoneal metastases arise from many different cancers
- Radspherin® is a **receptor-independent** treatment:
  - *effective regardless of the origin of the primary malignancy*

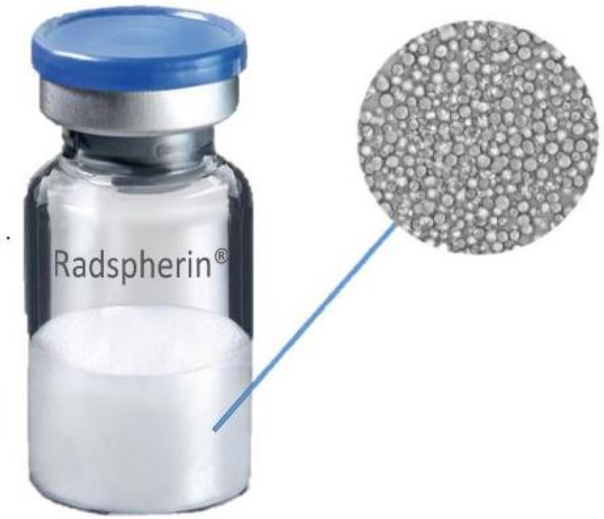


In-house GMP pilot plant with attractive capabilities

Oncoinvent has in-house GMP production capability



^{224}Ra produced from ^{228}Th, which has multiple sources



Microparticles and finished goods produced in-house

Early signals of efficacy and safety, platform potential across many high-unmet need indications, and an experienced team with a proven track record

High unmet medical need in peritoneal cancers and metastases

- No approved drugs or product aimed specifically at prevention of local peritoneal disease recurrence beyond HIPEC
- Fast track designation in OC with blockbuster potential in this indication alone

Unique mode of action with **clear efficacy signals**

- In Ovarian Cancer (Ph1) 90% remain without peritoneal recurrence 24 months
- In Colorectal cancer (Ph1/2a) 72% remained without peritoneal recurrence after 18 months

Strong safety profile with low systemic dose and few side-effects

- No dose-limiting toxicity
- Only 3 SAEs so far deemed “possibly related” to Radspherin*

Platform potential with a single radiopharmaceutical with **lower complexity** and risk

- Same product, same approach, same process for **any cancer with peritoneal spread**
- MoA is **effective for any tumor cell**, regardless of origin, mutation profile

Experienced team with a track record

- Founded by a team with **decades of experience in radiopharma**, including **developing the first approved alpha therapy**
- Operate **own GMP pilot plant** with unique knowhow

*Per data-lock June 2025
-one event of small bowel perforation, 72 days after Radspherin administration
-one event of intestinal obstruction 531 days after administration
-one event of procedural complication during Radspherin administration (disconnection syringe-catheter)
