

Production Scientist – temporary position, 1 year

Description

Oncoinvent AS is looking for a scientist to strengthen the production team at the company's manufacturing facility in Oslo. The production team at Oncoinvent is tasked with the development, and GMP compliant production of radiopharmaceuticals. The position is an exciting opportunity to work in an innovative and dynamic start-up company and participate in the development of novel pharmaceuticals. The position is temporary, limited to 1 year.

The successful candidate will, together with the production team and other Oncoinvent staff, drive the manufacture and development of Radspherin® for pre-clinical and early-phase clinical trials.

Key responsibilities:

- Routine, GMP compliant production of calcium carbonate microparticles and Radspherin® to supply clinical trials.
- Planning, designing and conducting laboratory- and production scale experiments with the aim of increasing the yield and scale of a process for the production of Radspherin®.
- Support the production- and R&D team during the development of new manufacturing processes.
- Write and review experimental protocols and reports. Document experimental procedures and results according to GLP and GMP guidelines.
- Write and review batch manufacturing records. Produce and document the production of pre-clinical and clinical drug product according to GMP.
- Review and analyze results from laboratory- and production scale experiments. Communicate results and findings to Oncoinvent's staff and management team.
- This position requires the work with radioactive materials. It is therefore important to comply with radiation protection and other health and safety procedures during laboratory- and production scale experiments, and GMP production activities.
- Develop and maintain a working knowledge in Good Manufacturing Practice (GMP) and participate in annual GMP training.
- Help with maintaining the calibration and qualification status of Oncoinvent's production facility, equipment and instruments.
- Support production, QC and QA in the investigation and closure of any deviations. Aid production, QC and QA in the implementation of Corrective and Preventative Actions (CAPA).

Qualifications and experience:

The holder of this position should have the following documented qualifications and experience:

- M.Sc. in chemical engineering, process chemistry or other relevant discipline.
- Working knowledge in Norwegian and English.
- 1-3 years practical, hands-on experience in development and production of pharmaceuticals.

The following experience is desirable:

- Familiarity with GMP regulations and experience with working in clean rooms is an advantage.
- The production of pharmaceuticals is highly regulated, and a successful candidate will be expected to show a high attention to detail with respect to planning and documentation of practical work.
- A successful candidate will have to be able to work in a multidisciplinary team while being able to plan and perform practical work independently.

Location

The holder of this position will be based at Oncoinvent AS, Gullhaugveien 7, 0484 Oslo. The position will report to the Head of Production.

About Oncoinvent

Oncoinvent is a privately held Norwegian company based in Nydalen, Oslo. The company is committed to developing novel, innovative products to provide better treatment options for cancer patients. The Oncoinvent team consists of 23 employees and the company is growing. In December 2017 Oncoinvent finished building a state-of-the-art manufacturing facility to produce drug product intended for use in pre-clinical and clinical trials.
